

Cloud

Cloud

Copy page

Run larger models in Ollama's cloud without requiring a powerful GPU. Inference runs on Ollama's cloud service.

System One is also available in the cloud for classification, yes/no questions, and scoring. Supported capabilities vary by model. Cloud models currently do not support **structured outputs**.

Choose how to connect

Creating an API key

Call `https://ollama.com/api` directly without installing Ollama.

Models

Run cloud models from the Ollama app, CLI, local API, or official libraries.

Usage

Review usage, balances, plans, and API reporting.

FAQ

Find answers about accounts, authentication, privacy, and requests.

Both connection methods require an Ollama account. Browse the available models in the **cloud model library**.

Use only local models

To keep inference on your own hardware, follow **Run a model locally**. You can also **disable cloud features**.

Retirements

Cloud models may be deprecated as newer models become available. See **Cloud model lifecycle** for upcoming and past retirements.

Data handling

Ollama processes cloud prompts and responses to answer your requests. We do not use them to train models. Read the **Privacy Policy** for details or see the **Cloud FAQ**.
